GREENWICH ECO
GOING GREEN

Todays burn will cost you tomorrow, keep yourself and earth cool.
-John Bennett, CEO-

OUR MISSION:

AT Greenwich Eco, we strive to educate the world about the environmental and economic threats posed by climate change.

changing migration patterns and plants are changing the dates of activity," such as trees budding their leaves earlier in the spring and dropping them later in the fall.

Hannah Payne, a professor of geology and environmental science at the University of Georgia.

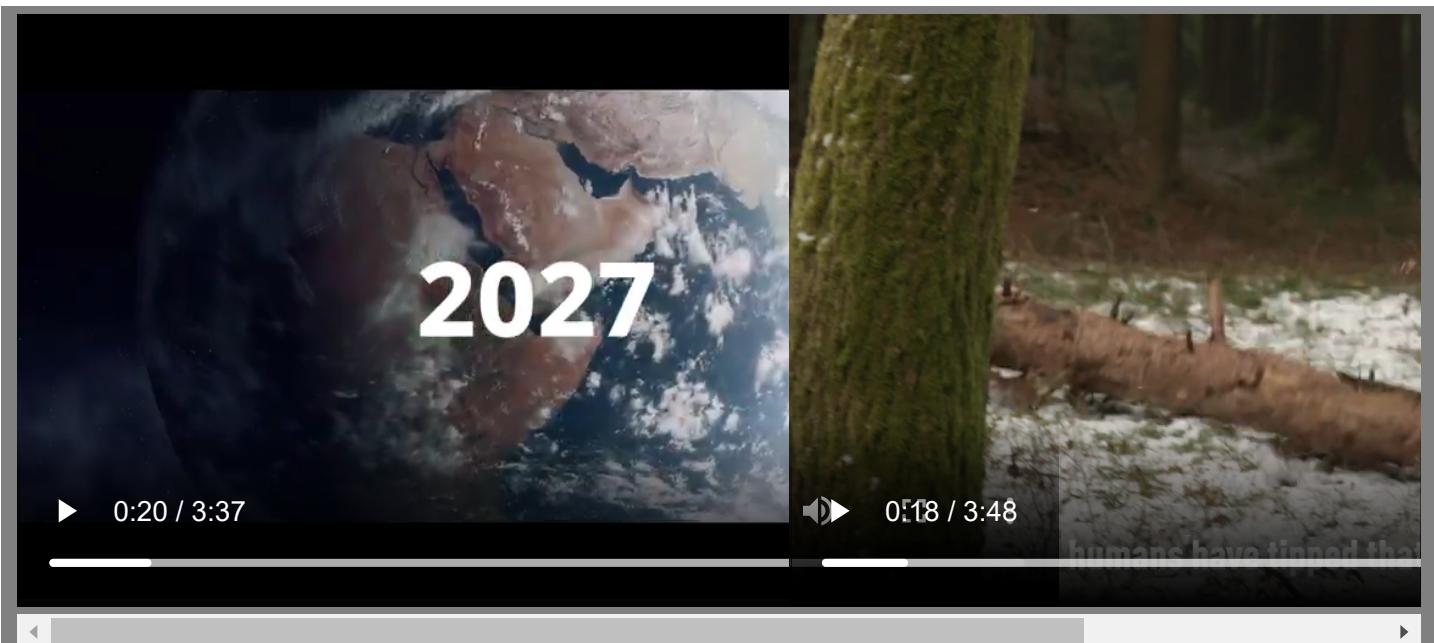

Skyler Goldman, professor at the University of Utah, reports that global warming has been escalating since the Industrial Revolution. In order to solve this danger, we have to reduce the consumption of energy and use the alternative energy resources. Solutions

- increases in wind and solar power
- use of biofuels from organic waste
- setting a price on carbon production
- Aforestation
